

ENVIRONMENTAL POLICY

As Akon Hydraulic Valve, we design and manufacture hydraulic valves in the mobile hydraulic sector, which are preferred at home and abroad.

We see the environment as an important resource to be utilized and we believe that it should be protected in the best way so that future generations can benefit from this resource. For this reason, we work to minimize environmental impacts in all our activities and contribute to the protection and improvement of the environment.

Our responsibility to our employees and the environment;

*By strictly complying with all applicable national legislation and other requirements related to our sector,

*By meeting the requirements of the ISO14001 standard,

*By organizing training activities and raising awareness of our employees, suppliers and subcontractors on environmental protection,

*By carrying out activities to reduce the use of natural resources, prevent environmental pollution and recycle our wastes,

*By ensuring that the wastes generated during our activities are primarily reduced and separated at the source, recycled and disposed of with the most appropriate methods

*By following the developing technology, keeping the efficiency of our facility at the highest level and continuously improving our Environmental Management System to fulfill our obligations.
